KILLS WEEDS & ROOTS FAST
 VISIBLE RESULTS IN 24 HOURS

RESOLVA 24H CONCENTRATE FOR USE ONLY AS A HOME GARDEN WEEDKILLER MAPP 13671

INSTRUCTIONS FOR USE

Resolva 24H[®] Concentrate is ideal for fast knockdown and effective control of annual and deep-rooted perennial garden weeds including grasses, docks, nettles, dandelion, bindweed and many more.

WHERE TO USE - Resolva 24H[®] Concentrate can be used to control weeds on all patios and driveways, along fences and areas where weeds are a problem. For use on unwanted vegetation. **DO NOT SPRAY HEDGE BOTTOMS**. **DO NOT** apply to lawns or other wanted plants unless you want to kill them. Take extreme care to avoid drift as Resolva 24H[®] Concentrate kills all green plant growth, including grass. Resolva 24H[®] Concentrate is broken down naturally in the soil.

WHEN TO USE - Resolva 24H[®] Concentrate should be applied from February to September. Use on a calm day when weeds are actively growing and have a large leaf area to absorb the weedkiller spray. Rainfall within 6 hours of application may reduce effectiveness and require retreatment. Resolva 24H[®] Concentrate kills most weeds with a single application. Some tough weeds may need a repeat treatment if regrowth appears. Two applications is the maximum number permitted.

HOW TO USE - Always read the label fully before use. As good general practice the wearing of gloves is recommended when using this product although this is not a requirement. **SHAKE WELL BEFORE USE**. Spray weed leaves lightly until visibly moistened but avoid wetting to run-off. Do not walk into treated areas until the spray has dried on the leaves to avoid transfer to lawns and other vegetation. Treatment effect on some weeds will be seen within a few days. Other tougher weeds may not show effects for up to 4 weeks. Leave weeds for at least 7 days before cultivating. Planting may commence immediately in untreated soil adjacent to treated weeds, as long as new plantings are not in contact with the treated weeds. Fill the watering can or sprayer with the required volume of water. Using the measuring cap provided, carefully measure the quantity of product required based on the table below.

Weeds treated	Watering Can Apply in 5 litres of water		Knapsack or handheld sprayer Apply in 1 litre of water		Time of year to treat
	Resolva 24H [®] Concentrate	Area Treated	Resolva 24H [®] Concentrate	Area Treated	
Annual weeds & grasses	15ml	22 sq.m	35ml	50 sq.m	February to September Weeds should be actively growing. Grasses need at least 5cm of leaf and broad-leaved weeds need at least 2 leaves expanded when sprayed.
Perennial & difficult broad-leaved weeds e.g. Thistles, Docks, Dandelion, Bindweed	30ml	22 sq.m	70ml	50 sq.m	February to September Weeds should be actively growing. Perennial weeds must have full emergence of healthy green foliage, broad-leaved weeds are most susceptible when at or near flowering.

Replace cap after use.

- Do not apply though or store in galvanised or unlined mild steel sprayers. Always thoroughly clean the sprayer or watering can after use.
- Application using a watering can may give slightly poorer weed control than using a sprayer.
- For maximum weed control, especially of less susceptible weed species (e.g. cranesbill, common nettle, bumble) use of a knapsack or handheld sprayer is recommended.
